1. Miscellanea

You can include raw HTML, PDFs, plain-text, and other files in Forrest output by placing them in `src/documentation/content` and they will be copied over automatically. You can then link to them as normal, e.g. `<link href="hello.pdf"/>` and `<link href="test1.html/>`

You can also have sub-directories such as `src/documentation/content/connectors` which reflects your `xdocs/connectors` tree. The raw files will then end up beside your documents.
